FIG. 25

Figure 1 is a scatter plot showing the relationship between the number of genes in a cluster (X-axis) and the number of genes in the same cluster in the same tissue (Y-axis). The X-axis ranges from 0 to 100, and the Y-axis ranges from 0 to 100. A diagonal line represents the identity line (y=x). Data points are clustered along this line, indicating that genes in a cluster tend to have a similar number of genes in the same cluster in the same tissue.

FIG. 35

Figure 1 is a scatter plot showing the relationship between the number of children in the household (X-axis) and the number of children in the neighborhood (Y-axis). The X-axis ranges from 0 to 10, and the Y-axis ranges from 0 to 10. The data points are labeled with letters A through J. A dashed line represents the linear regression fit, showing a positive correlation. The regression equation is $Y = 0.8X + 0.2$, and the R^2 value is 0.85.

Fig. 42

Fig. 43

A black and white photograph showing a close-up of a textured, diagonal surface. The surface appears to be covered in small, dark, irregular specks or granules, giving it a rough, pebbly appearance. A thin, dark line runs diagonally across the frame, separating the textured area from a lighter, more uniform background. Near the bottom center of the textured area, there is a small, white, square-shaped marker or object. The overall image has a grainy, high-contrast quality, typical of a photocopy or a low-quality scan.
